

Abstract of Technical Disclosure

The Math and Reading Standardized Test Plus! is a CD idea designed to help children of elementary school age prepare for and take their Standardized Tests in the subject areas previously mentioned. A learning tool of this magnitude is purely based upon the curriculum of that specified grade. By incorporating levels of easy, medium, difficult and extreme difficult, children can advance or go to any specified level and see if they are prepared for that stage. There is a pretest level that can be implemented to automatically adjust settings. By putting in what I call the "extreme factor," children will be able to take their pretest with background classroom noise (at certain levels) thus diminishing the stressor of test anxiety, which can lead to poor performance. It also provides students during the summer months with a "heads up" approach so they will be prepared for the upcoming grade.
